

IN THE SPECIFICATION

Please replace the current title, "CAMERA," with the title immediately below.

"CCD CAMERA HAVING AN ANTI-STOKES PHOSPHOR BOUND THERETO"

Further, please delete the current abstract of the specification and replace with the following paragraph:

A camera comprises a charge-coupled device (CCD). The CCD has an anti-stokes phosphor bound to the light receiving surface of the CCD. The anti-stokes phosphor emits electromagnetic radiation having wavelengths in the range of 950nm to 1100nm. A housing surrounds the CCD and defines a filtered aperture through which, in use, light can pass and be received by the phosphor CCD.
